

NovaBACKUP DataCenter Standard Upgrade Process

Please follow the steps specified below to upgrade NovaBACKUP DataCenter to a later version.

Upgrade Instruction

1. Download the Command Server installer (CmdSrv-...) for the respective OS along with the SW-Depot ZIP file.
2. Start the Command Server installer and choose the install directory of the existing NovaBACKUP DataCenter installation and perform the install. During install, the SW-depot ZIP file will be automatically extracted.
3. After the install, open the DataCenter GUI.
4. Navigate to System -> NodesManagement. for updating the client versions. Mark all nodes and select "Update Node(s)..." and update them to the latest version.
5. To update the database information of the Command Server, mark all nodes and select "Sync node info". Click OK on each upcoming check box.
